The Gravel Gossip

Newsletter of

The Diamond State Aquarium Society, Inc.

Hi all!

Hope all are well.

We are having our first in-person outdoor meeting of 2021 at Iron Hill Park in Newark, Delaware, Saturday, May 15th, from 12 noon to 3pm. There will be free refreshments and a live fish and plants auction starting around 1pm. So make sure to mark your calendar for Saturday, May 15th! Please bring your own fold-up chair as the pavilion may not be available for this meeting.

One thing I would like our members to do that I have seen done with other clubs, such as DCAS, please email me what you are planning to put in the auction for our May meeting auction. I will post the items that will be auctioned off ahead of the meeting. This gives everyone an idea of what is going to be available for sale at the auction ahead of time.

Please note our next DSAS board meeting will be on Sunday June 6th, at 7pm, via Google Meet video conferencing. Invitations will be sent out by email a couple days before the meeting. If you do not receive the invite and want to attend, please call or email me.

Be sure to visit us on Facebook and on our new website, <http://dsas.online> or <http://dsas.club>. The site is updated monthly with any presentations scheduled for future meetings.

Please check our website for any updates.

For Sale: "Almost Natural Tropical Fish Food"

For many years now as most of you know, I have been making my own frozen fish food. It has changed over the years to the point that I am using mostly fresh and naturally found seafood - it contains NO fillers - absolutely NONE! Anyone who has been to my home and seen my fish can attest to the fact of how well this food has been for them. The tremendous size they put on at such a young age and the colors are both astounding, not to mention the overall health of the fish. I attribute it to my homemade "Almost Natural Frozen Tropical Fish Food". With basically all of the same ingredients, I am proud to offer "Almost Natural Tropical Fish Food" in flake and pellet form to other hobbyists.

**** **FRESHWATER FLAKES** ****

**** **SUPER COLOR FLAKES** ****

**** **SUPER COLOR BALLS** ****

**** **SHRIMP PELLETS** ****

**** **FREEZE DRIED BLOOD WORMS** ****

**** **SUPER GREEN FLAKES** ****

**** **ALGAE DISCS** ****

"Breeders Delight Tropical Fish Food"

In addition to the Freeze Dried Blood Worms, the following flake foods are extremely wonderful foods for conditioning your fish for breeding.

AQUARIUM BASIC CONCEPTS . . .

Article in the ABC Series

By Ed Keene, DCAS

Part #27 in This Series

By Ed Keene, DCAS

Why Quarantine?

Have you ever heard of anyone who had a very well established show aquarium with beautiful, happy, and healthy fish? Well one day they decided to go acquire another fish to add to their aquarium. They brought it home and after having gone through the new fish acclimation process, added it to their aquarium. Within a week several fish had died and several others were looking pretty bad. Turns out a disease was running wild in the aquarium and it all originated from the newly acquired fish. This scenario happens often, more especially with beginning hobbyists. This problem can be prevented and one of the best ways is by the use of a quarantine aquarium.

One of the main purposes of the quarantine aquarium is to hold newly purchased or otherwise acquired fish in an aquarium for a period of 2 to 3 weeks. Keeping a fish separated from any future aquarium mates allows for easy disease detection and other observation. Many times an infected fish will not show any signs of the disease for 10 to 14 days. By keeping a fish in a quarantine aquarium you allow for the disease to proceed through its cycle and finally show itself. If during the quarantine period, the fish should show signs of parasites or other disease, you can medicate it with absolutely no risk of impacting the fish in your show aquarium. It is also very cost effective to medically treat a small quarantine aquarium rather than a much larger aquarium.

The size of your quarantine aquarium will be based upon the size of fish you are going to acquire. For the average sized fish, say up to 4 or 5 inches, a 10 gallon aquarium will serve the purpose well. The quarantine aquarium does not have to have the best and the fanciest equipment on it. In fact, quite the opposite is the suggested way to go and the preferred way of the more experienced hobbyist.

Keep it simple! The standard equipment for the quarantine aquarium is the aquarium with a cover of some type, a heater, a low tech filter without carbon, a light, and a decoration of some type. The decoration, which does not have to be anything fancy, is simply to give the fish a feeling of security, knowing that it has something to hide behind or inside of. A piece or two of plastic PVC pipe will work just fine. This is all you need. It is basically a bare aquarium - no gravel, no plants, no nothing -other than what I previously mentioned. Keep in mind the quarantine aquarium is established to aid in the cure of any fish which might be infected with some type of disease. It is not one which is being entered into the world's greatest looking aquarium contest.

Most any type of filter is adequate provided carbon or charcoal is not used. Remember, carbon adsorbs chemicals in the water, i.e. medication. If you end up medically treating the quarantine aquarium, the carbon will defeat your attempts. Power filters, corner box filters, even canister filters can be used. Just remember - no carbon. Because several of the aforementioned types of filters are expensive and not really being used to their full potential, many hobbyists turn to sponge filters for quarantine aquarium use. The sponges are inexpensive and will provide good bacterial filtration. The sponge filter can be operated with an air pump or with a power head attached to it.

If medical treatment of your fish is necessary, you should allow for another 2 to 3 week period of quarantine after your last treatment. This will assure that a subsequent disease cycle is not in progress. Once this period has been completed, you can begin the acclimation process of moving your fish to your show aquarium.

Continued page 11

Continued from page 10

In conclusion

If you have the space available for a quarantine aquarium, it would be a wise decision on your part to have one and put all future fish acquisitions through the quarantine process. Of course on the other hand, if you reject the idea of a quarantine aquarium and a disease completely terminates the life of all your prize fish, you have the dubious distinction of being able to go out and spend lots of money to purchase all brand new fish! The choice is yours.

DSAS monthly board meeting scheduled for Sunday, **June 6nd, 2021**, at **7pm**, via video conferencing through *Google Meet*. Invitations will be sent via email a day or two prior to the meeting. Please respond whether or not you are able to attend.

All DSAS board members are requested to attend and confirm if they are able to attend.

Other members are welcome to attend.

These monthly board meetings will normally be scheduled on the Sunday one week before the general monthly meetings each month, including the summer months, except during a holiday. The meetings will be used to discuss future club activities, scheduling of speakers, field trips, and planning for the annual auction.

Directions: (for future in-person board meetings when resumed)
Same side of Basin Road as WP High School, shared development entrance with Penn Mart Shopping Center (Big Lots, Save-a-Lot, Rainbow stores, PNC Bank).
